2 sites compared for: farming · used a live tool while reasoning: onefivenine_tehsil_info

default

#1 · Good · 70/100

Village / Tehsil / District	Budasa / Tonk Khurd / Dewas
Groundwater depth (5yr mean)	6.1 m bgl Improving
Dominant land cover	Cropland 79.8%
Nearest road	478 m

jabalpur

#2 · Poor · 40/100

Village / Tehsil / District	Jabalpur / Jabalpur / Jabalpur
Groundwater depth (5yr mean)	1.4 m bgl Declining
Dominant land cover	Built-up 49.5%
Nearest road	n/a

Reasoning

DEFAULT — GOOD (70/100)

AI INTERPRETATION

The site labeled "default" is in Budasa, Tonk Khurd Tehsil, Dewas district. It has a very high cropland coverage (79.8% of 52.7 km²), which is ideal for farming. Groundwater depth is moderate with a five-year mean of 6.1 m below ground level and an improving trend, suggesting reasonable irrigation potential. Annual rainfall is 1,349 mm, and NDVI is 0.27, indicating decent vegetation health. The terrain slope is low (≈2.5°). However, the user preference for proximity to a railway station is not met; the live context states there is no railway station within 10 km of Tonk Khurd. Overall, this site is well suited for farming but does not satisfy the railway proximity requirement. Score: 70

JABALPUR — POOR (40/100)

AI INTERPRETATION

The "jabalpur" site is in the city of Jabalpur. While it is close to a railway station (the city has a major station), the land cover is predominantly built-up (49.5% of 32.6 km²), leaving little cropland for farming. Groundwater is shallow (five-year mean 1.4 m) and declining, which could limit irrigation. Rainfall is slightly higher at 1,440 mm, but the NDVI of 0.35 and slope of 3.5° are not particularly advantageous for agriculture. The site meets the railway proximity preference but is otherwise poorly suited for farming. Score: 40

Overall Summary

The best choice for farming is the default site in Budasa, which offers extensive cropland and reasonable water conditions, though it lacks nearby railway access. The Jabalpur site, while close to a railway, has mostly built-up land and poor irrigation prospects, making it the least suitable.
