1. Location & Administration

Village / Tehsil / District	Budasa / Tonk Khurd / Dewas
State	MP

CONNECTIVITY

Nearest road	478 m
Nearest major road	5,201 m MD2710 (beyond the 5.0 km AOI)
Nearest railway	n/a

GOVERNMENT GUIDELINE LAND RATE

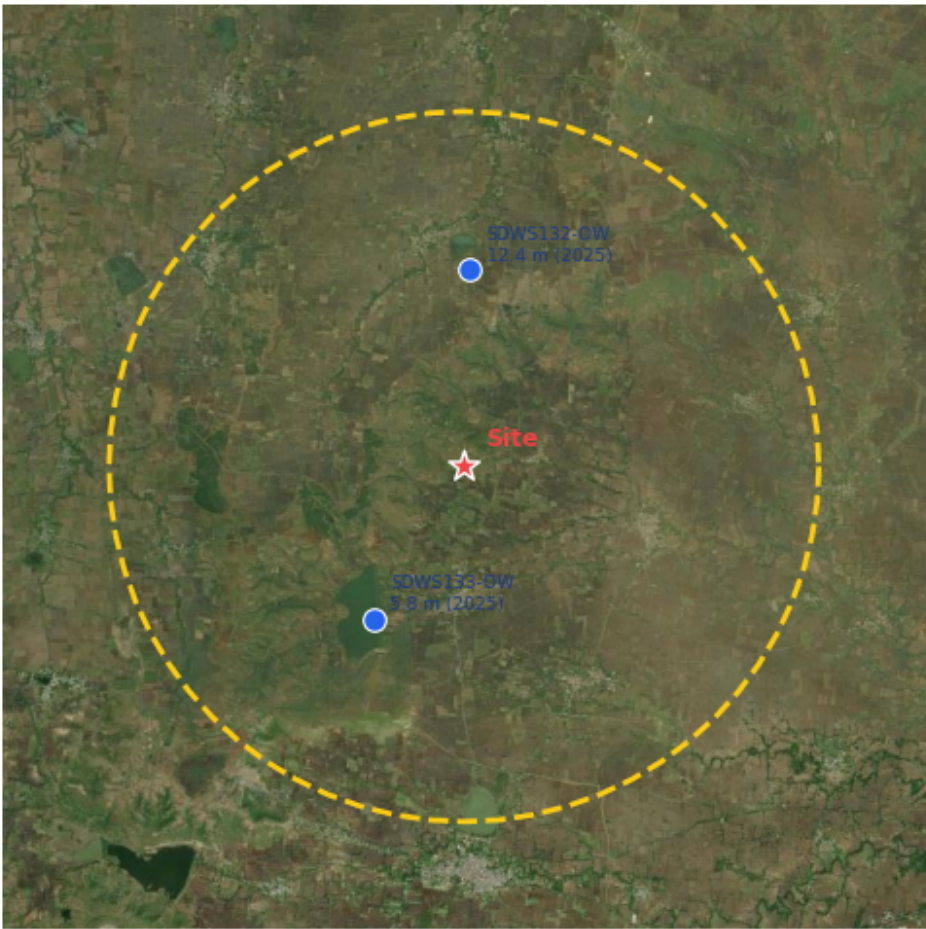

Type	Rate
Residential (per sqm)	1,000 Rs.
Commercial (per sqm)	1,000 Rs.
Industrial (per sqm)	1,000 Rs.
Irrigated agri land (per ha)	3,000,000 Rs.
Unirrigated agri land (per ha)	2,000,000 Rs.

AI INTERPRETATION

The site is in Budasa village, Dewas district, MP, about 1.8 km from the village center and 478 m from the nearest road, giving decent local access.

2. Water & Hydrology

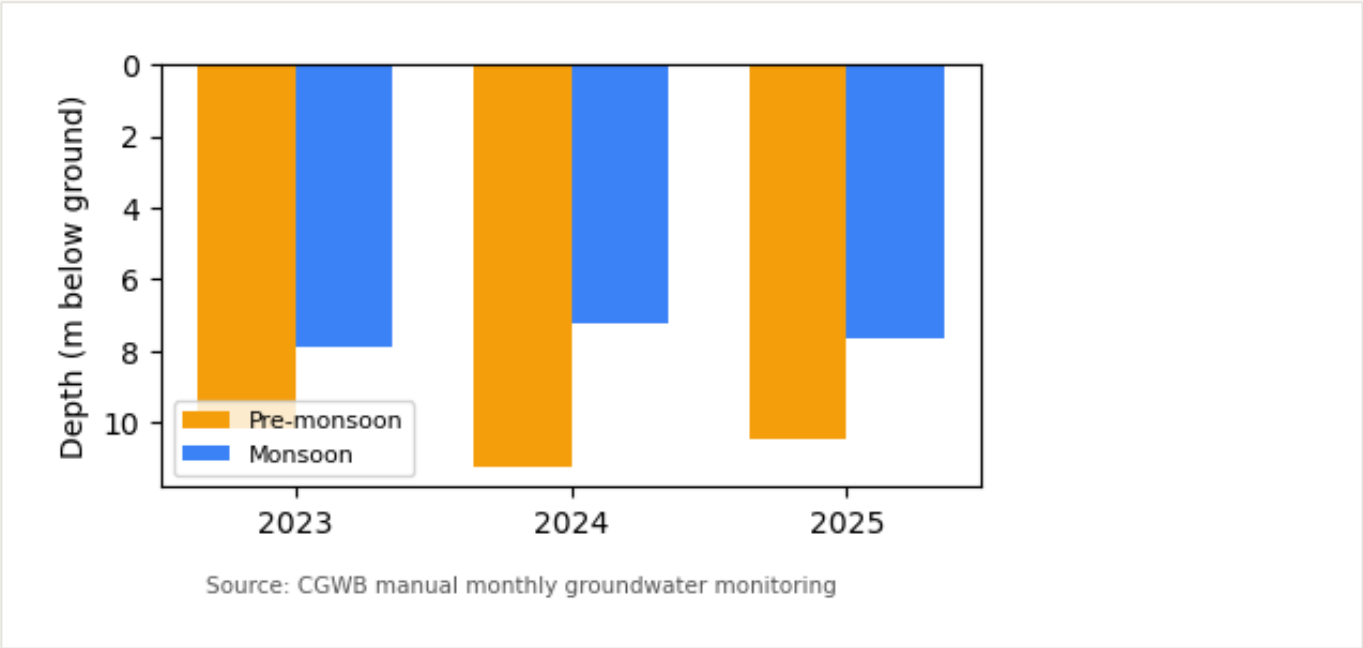

GROUNDWATER	
Latest mean depth	2.0 m bgl
5-year mean depth	6.1 m bgl
Trend	Improving -1.82 m/5yr change
Nearest well	2,284 m

Source: CGWB manual monthly groundwater monitoring

DEPTH BY SEASON, YEAR-WISE			
Year	Pre-monsoon depth	Monsoon depth	Fluctuation
2023	10.2 m	7.9 m	2.3 m
2024	11.2 m	7.2 m	4.0 m

Year	Pre-monsoon depth	Monsoon depth	Fluctuation
2025	10.5 m	7.6 m	2.9 m

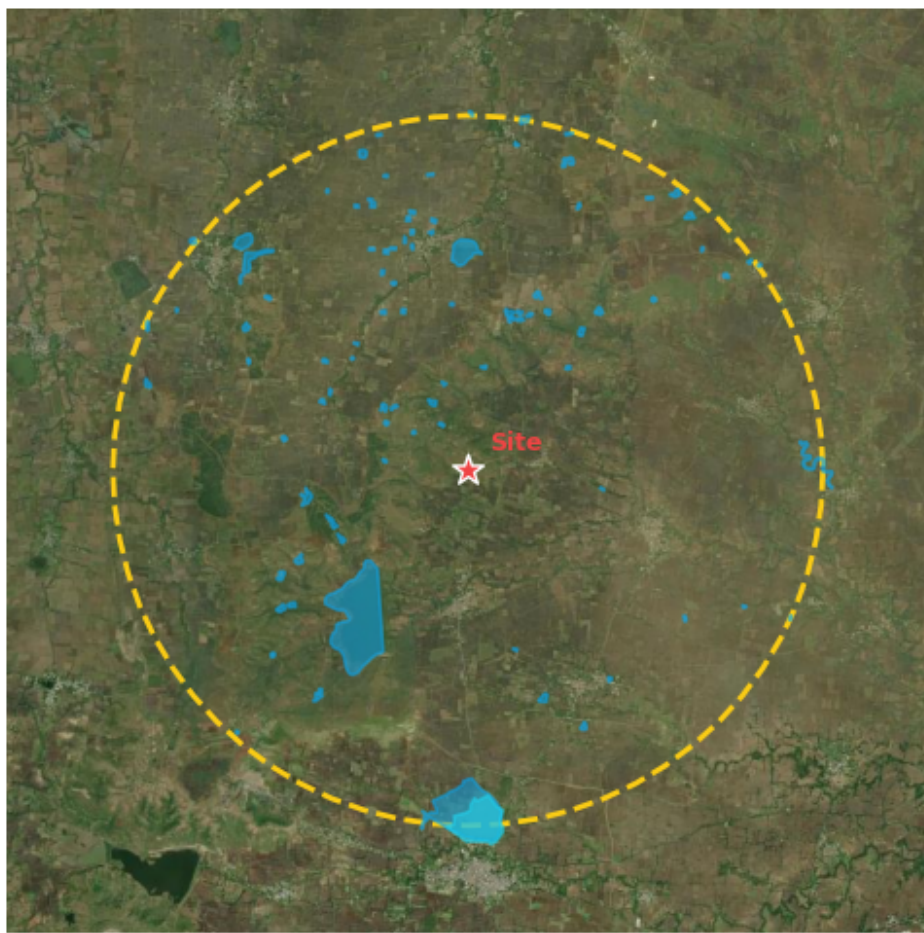

RAINFALL (2023–2025)

Year	CHIRPS annual	IMD annual	CHIRPS monsoon	Rain days
2023	1,350 mm	1,416 mm	1,207 mm	93
2024	1,371 mm	886 mm	1,284 mm	118
2025	1,325 mm	920 mm	1,109 mm	104

Annual/monsoon totals only — monthly rainfall isn't currently tracked by this pipeline.

SURFACE WATER

Nearest surface water	4,183 m
-----------------------	---------

Source: SAC water bodies + river floodplain + OpenStreetMap

Name	Type	Distance
Unnamed water body	Tank/Pond	646 m
Unnamed water body	Tank/Pond	835 m
Unnamed water body	Tank/Pond	933 m
Unnamed water body	Tank/Pond	1,052 m
Unnamed water body	Tank/Pond	1,132 m
Lodri	River	7,856 m
Lodri	River	7,938 m
Lodri	River	8,550 m
Lodri	River	8,559 m
Lodri	River	8,592 m

FLOODPLAIN

Nearest river	7,856 m Lodri
---------------	-------------------------

AI INTERPRETATION

Groundwater averages 6.1 m below ground, with a recent depth of 2 m, showing improving levels; rainfall is moderate at ~1,350 mm annually with a strong monsoon contribution.

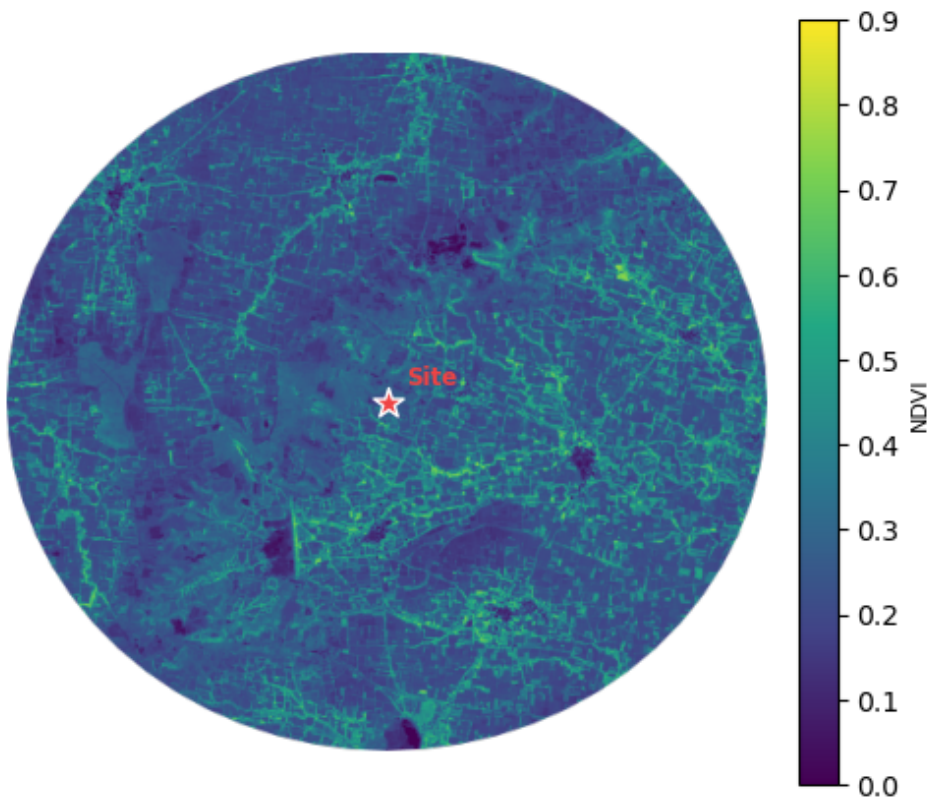

3. Climate & Land Use

TEMPERATURE

Annual mean air temperature	25.0 °C
Warmest / coldest month	May (33.7 °C) / January (17.9 °C)
Land surface temperature (annual)	38.4 °C range 28.9–44.1 °C

VEGETATION (NDVI)

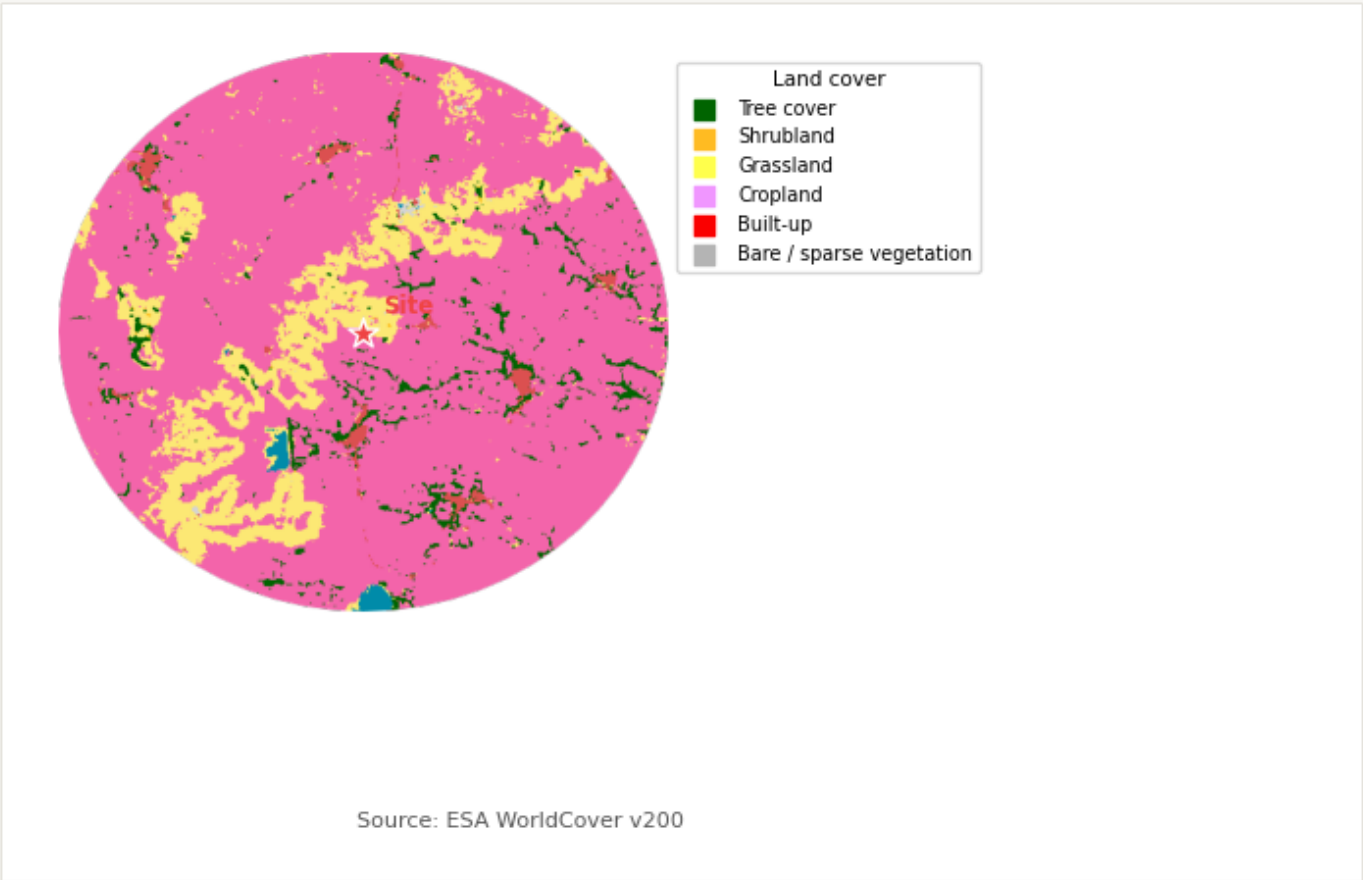

Whole-year mean NDVI	0.27 range -0.14–0.78
Area with NDVI ≥ 0.30 / ≥ 0.50	28% / 4%

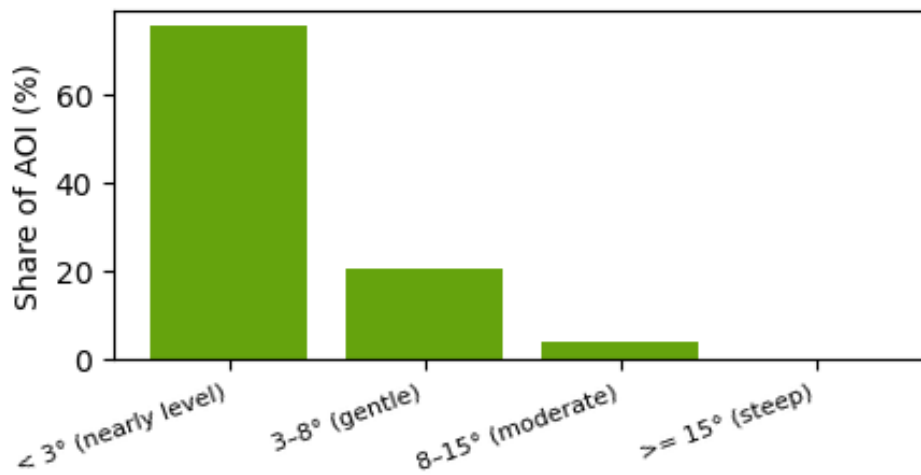

Source: Sentinel-2 (COPERNICUS/S2_SR_HARMONIZED)

LAND COVER

Class	Share	Area
Cropland	79.8%	52.71 km ²
Grassland	14.1%	9.32 km ²
Tree cover	4.0%	2.64 km ²
Built-up	1.4%	0.93 km ²
Permanent water	0.5%	0.34 km ²
Bare / sparse vegetation	0.2%	0.11 km ²
Shrubland	0.1%	0.05 km ²

TERRAIN	
Elevation	472–579 m mean 519 m
Slope	mean 2.5°, median 2.1° 90% of AOI between 0.0°–7.3°; right at the site (100 m): 9.2°

Source: USGS SRTM 1 arc-second (SRTMGL1_003)

AI INTERPRETATION

The land is gently sloping ($\approx 2.5^\circ$), mostly cropland, with an average temperature of 25°C and moderate vegetation health ($\text{NDVI} \approx 0.27$).

4. Human / Locality Context

POPULATION & CENSUS

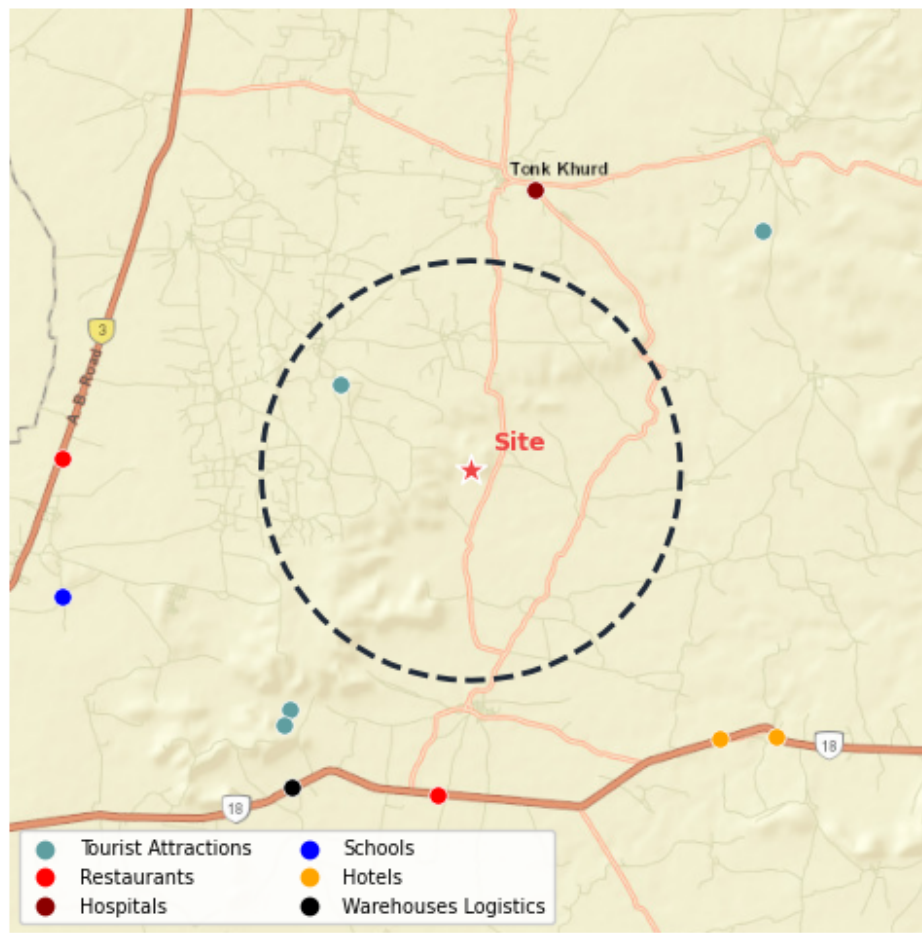

Village population	1,622
Literacy	72.8%
SC / ST share	24.3% / 0.0%
Built-up land (WorldCover)	1.4%

SETTLEMENTS

Nearest settlement (any type)	Budasa village, 1.8 km
Settlements within 10 km	51

NEARBY PLACES (10 KM)

Category	Count	Nearest	Distance
Tourist Attractions	4	■■■■■ ■■■■■■	3.4 km
Restaurants	1	Shree mukut family restaurant	7.1 km
Hospitals	1	AROGYA Hospital	6.3 km
Schools	0	n/a	n/a
Markets	0	n/a	n/a
Hotels	2	BR Resort & Club	8.0 km
Industrial Businesses	0	n/a	n/a
Warehouses Logistics	1	Dewas warehousing jamgod	8.0 km

Source: Esri World Street Map + SerpApi / Google Maps

AI INTERPRETATION

The area has 51 settlements within 10 km, a nearby hospital 6.3 km away, and a few restaurants and hotels within 8 km; no schools or markets are listed.

5. Overall Summary & Suitability for farming

STRENGTHS

- + Good groundwater trend
- + Moderate rainfall
- + Large cropland area
- + Low slope
- + Proximity to village

CONCERNS

- ! No nearby schools or markets
- ! Limited water bodies
- ! Groundwater depth varies seasonally
- ! No industrial activity nearby

TRADE-OFFS

- Balancing groundwater depth with seasonal fluctuation
- Choosing between high rainfall and potential waterlogging
- Using cropland while managing limited market access

Note: This report draws on Sentinel-2 (vegetation), ESA WorldCover (land cover), CGWB (groundwater), CHIRPS/IMD (rainfall), ERA5-Land (air temperature), Landsat (surface temperature), USGS SRTM (terrain), OpenStreetMap (roads/rail/water), Survey of India village boundaries with MP govt guideline rates and census, and SerpApi/Google Maps (nearby places). It contains no price-trend or appreciation data — any land price shown is a single point-in-time snapshot, not a forecast. It assesses physical suitability (terrain, water, climate, access) from real data; legal suitability (title, zoning, permits) is not covered. OSM, SerpApi, and Overpass coverage varies by area, and NDVI/rainfall/temperature reflect the data window used at analysis time, not a guarantee of future conditions. Electrical power grid, legal documents, and market price datasets are not yet part of this system and will be added soon.
